Strike!

You successfully commissioned a NodeMCU custom build from the `master` branch. You selected the following 14 modules: `enduser_setup` `file` `gpio` `http` `net` `node` `pcm` `rtctime` `sigma_delta` `sntp` `tmr` `uart` `wifi` `ws2812`.

We'll keep you posted by email about the progress of your build.

In the meantime I suggest you take a look at the build stats (stats.php) to find out how your firmware configuration compares to others in the community.

Pay-back time

Do you like this service?

Image I was your neighbour, the guy next door.

Would you buy me a beer for all the hard work I do for you? Chances are I'm not right next door but the beauty is: beer can be teleported thanks to quick'n easy PayPal donations (https://www.paypal.com/cgi-bin/webscr?cmd=_s-xclick&hosted_button_id=7DWME2TBHH6B8). A beer in a Swiss bar costs around USD $5.
The other way to support this service is by shopping at Banggood (http://www.banggood.com/?p=PT19151269030201502M) or AliExpress (http://s.click.aliexpress.com/e/qVRvJMbqB) through my affiliate links. For every item you buy I get a small kickback. Thank you!
